Objective: Full-stack software engineer seeking a web development position to create user-centric solutions

Technologies: Next.js, Ruby, Ruby on Rails, Python, Django, Flask, Java, Spring Boot, GitHub

EDUCATION

App Academy *New York, NY, USA* 01/2023 – 05/2023

1000+ hours immersive software development course with a focus on full stack web development

Virginia Tech *Blacksburg, VA, USA* 08/2014 – 05/2017

Bachelor of Science in Finance and Management

EXPERIENCE

Chinamerica Education Development Consulting Associates *Remote, USA - Part-time* 11/2023 - Present

Education Consultant

- Placed 50+ students in top 30 schools by providing comprehensive educational consulting services, guiding students through academic and extracurricular planning, college selection, and application submission processes
- Provided professional editing and feedback on structure, tone, and content to align with institutional expectations

App Academy *Remote, USA - Part-time* 06/2023 - Present

Software Engineer Assistant

- Conduct thorough code reviews for 100+ students to debug and optimize frontend and backend of projects
- Enhance student skills in whiteboard coding, pseudo-coding, and problem-solving by conducting technical assessments

New Oriental Education *Shanghai, China* 10/2020 – 05/2022

English as a Second Language Teacher

- Improved students' pronunciation, grammar, and vocabulary, resulting in 98% of students passing all tests
- Consistently improved presentation method, resulting in being the only teacher who required no training
- Organized and presented company material to classes of 10 – 15 students in an efficient manner that was later used by other teachers as well

Accenture *Arlington, VA, USA* 09/2017 – 09/2019

Management Consulting Senior Analyst

- Built and designed web tool used by 1000+ employees to appropriately format, capture, and analyze client input data
- Collaborated with clients to gather user-story information to optimize UI/UX, eliminating possible input errors by users
- Assisted in creating routine communication material sent to client leadership and 1000+ employees
- Performed market analyses to capture market size, competitor share, and identify potential entry points

PROJECT HIGHLIGHTS

StarWarsbnb (*React, Redux, Ruby on Rails, JavaScript, PostgreSQL, AWS S3, Google Maps, Bootstrap*) [Live](#) • [GitHub](#)

An Airbnb clone which allows users to have full reservation and review functionality

- Displayed real-time reservations and eliminated page reloads for an improved UI by utilizing Redux
- Created RESTful API routes for efficient data transfer of CRUD reservations and reviews
- Ensured scalable architecture for large volume of uploading and retrieving image assets with Amazon Web Services S3
- Validated user inputs and accurately stored reservation and review data using Active Record ORM models

Benchmarkers (*MongoDB, Express.js, React, Redux, Node.js, Google Maps*) [Live](#) • [GitHub](#)

A sport-focused social web app used to create and join local sporting events

- Implemented client-side form validation using Redux to provide error handling and preserve previously input information to users when creating/editing events
- Streamlined event creation process for users by integrating Google Maps API, allowing users to use point-and-click or text autocomplete features for location geocoding
- Reviewed and corrected API routes for platform-wide consistency when users deleted their own profile
- Employed GitHub's version control to support CI/CD and prevent merge conflicts by using feature branches, while also facilitating code quality assurance and feedback via Pull Requests
